Guidance Re: Tuberculosis Screening for Entry into Treatment Centres

Background:

Tuberculosis (TB) screening for entry into detox or treatment centres has been a barrier for some clients because of the perceived need to include a Tuberculin Skin Testing (TST) and/or chest x-ray as part of that screening process. Consequently, FNHA TB Services has worked with the FNHA Mental Wellness Clinical Team to simplify the TB screening process by incorporating it directly into the medical assessment part of the treatment centre application. This assessment may be completed by any qualified practitioner (MD, NP, RN).

The purpose of TB screening for entry into treatment programs is to rule out active TB. Thus, the only requirement for entry into a treatment centre is a negative symptom assessment. A TST or chest x-ray is not required unless the client is having symptoms suggestive of active TB.

Despite this, screening for latent TB infection (LTBI) with a TST may be of benefit to the client since people who use substances are often at higher risk for exposure to TB and at higher risk for progression to TB disease if they have LTBI. Those with known LTBI may also benefit from treatment to prevent active TB disease. As such, we continue to encourage Community Health Nurses to offer screening to these clients as part of their Priority Screening for TB program.

Process if using the new TB screener contained within the Medical Assessment section of the FNHA Treatment Centre Referral Package

1. Complete TB screening pages in medical assessment portion of the application.
2. If the client has symptoms suggestive of active TB (productive cough for > 3 weeks, unintentional weight loss, drenching night sweats, etc.), collect 3 sputum for AFB and send client for CXR. Notify FNHA TB services by phone (604-693-6998) or email (FNHATB@fnha.ca) and complete the regular BCCDC TB screening form for submission.
3. If client has no concerning symptoms, complete the remainder of the TB screening part of the medical assessment. Provide education to the clients regarding their individual risks and, if appropriate, the benefit of treating LTBI.
4. Obtain consent from the client to share the information with FNHA TB services.
5. Fax only that section of the medical assessment to FNHA TB Services at 604-689-3302.
6. No additional clearance letter is required.
7. If there is a significant time lapse between when the assessment is done and when the client enters treatment program (i.e. 6 months), advise client to report the development of any symptoms to their health care provider or yourself.
8. If another practitioner is completing the medical assessment you may advise them on this process (e.g. they do not need to refer the client to you for TST).
9. If the client is interested and available at this time for latent TB screening (e.g. TST), or for a discussion regarding the benefits of the treatment of LTBI, you are encouraged to go ahead and do that. Otherwise make arrangements to have the client return at another time for this screening. Add client details to your Priority Screening list to ensure you remember to follow-up.

Process if using the BCCDC TB Screening Form

Non-FNHA Treatment Centres may not have incorporated TB screening into their medical assessment package.

1. Complete the BCCDC TB Screening Form as you normally would.
2. If the client has no symptoms of active TB, you can provide clearance for entry (sample clearance letter attached). You do not need to wait to receive a clearance letter from FNHA.
3. No TST or referral for CXR is required unless the client is having symptoms. Check off "TST not done". Provide education to the client regarding their individual risks and, if appropriate, the benefit of treating of LTBI.
4. If the client is available for latent TB screening and a TST is appropriate, go ahead and do that now or have them return at a later date.
5. Fax completed screening form to FNHA TB Services at 604-689-3302 or, if entering into Panorama yourself, notify us that a screening has been done.

Guidance Re: Tuberculosis Screening for Entry into Treatment Centres cont...

Documentation in Panorama:

If you have access to Panorama, enter the screening using these steps:

1. Open a TB Investigation (Case - Person Under Investigation)
2. Ensure client demographics are updated, especially the "Address on Reserve Administered By" section. Be sure to mark current address as the "preferred address".
3. In Treatment and Interventions>TB Skin Test Summary, update TB History Summary.
4. Create TB Follow-Up Only (unless skin test is done). Enter 06 as reason for screening if client is going for substance use program or enter 12 if going for trauma/ family program. Under follow-up, select No Follow-Up Required". Under Follow-up Details enter "Client denies signs and symptoms of active TB at present. Cleared for program entry." You can also add other details, such as "Asked client to return next month for TST", etc.
5. Complete the Signs and Symptoms and Risk Factor sections.
6. You may complete allergies and external source information if this is available to you.
7. You can generate a clearance letter directly from Panorama. To do this, ensure you have the Investigation in context. Go to Reporting and Analysis>Reports>Investigations, scroll down to Tuberculosis Disease section. Select the hyperlink RBCY TB005 Client No Active TB Letter. In the top navigation banner, select Generate Report Now. Select Open in Adobe and print for the letter for client.

For additional information or support, please refer to the [BCCDC Decision Support Tool](#) or contact FNHA TB Services.

Section 13: Tuberculosis (TB) Screening

The purpose of TB screening for entry into treatment programs is to **rule out active TB**. *Screening for latent TB is not required, and should never delay program entry*, but might be of benefit to the client and can always be done at a later date.

People who use substances are an important group to consider for regular TB screening and this screening continues to be an essential part of TB prevention and overall wellness.

For follow-up purposes, does client reside in a First Nations community: ☐ No ☐ Yes (>50% of the time)
